You have a lot of documents to keep on your computer. If the storage space available on your internal drive is not enough, then you should consider installing an external hard disk. If you are saving a lot of data on an external hard drive, then you need to make sure that the integrity of your files is preserved. You can use a tool that enables you to backup your data to prevent it from getting lost if you remove the drive from the computer. OtoCopy allows you to synchronize the files that you keep on your external hard disk and ensure their accessibility in the future, even if the drive becomes unreachable. The application is designed to be

easy to use and requires no special attention from your part. Just specify the location of the folder that will be used to store the backup, the directory you would like to copy and a few additional parameters. The software then performs a synchronization of all files located in the folder you have specified. To be more precise, the process takes a few minutes and all files are added to a queue. The application then performs a backup of the files and the folders stored in the given folder to another folder. You can view the progress in real-time, so you are able to monitor the backup. After the process is completed, the file types that should undergo backup are displayed. The ones that you have ignored are also listed. The software then deletes

the files and folders in the original directory. If any errors occur, then the software displays a report that tells you what went wrong. The application enables you to perform a backup of the files and folders on your external drive with a few clicks. In case you want to find the archived files and folders, you can use the provided option that shows the archived files and folders on your hard drive. If you are working on a laptop, the external drive can be removed and the backup performed later on. In case the drive becomes unreachable, you can perform a complete synchronization of the archived files and folders. This is easily done by pressing the sync button located on the application window. Pros: • The backup is easy to set up and perform. • The

software offers an option that allows you to sync the archive. • You can view the progress in real-time, so you can monitor the backup. • It can backup folders as well as single files. Cons: • The software does not work with ZIP files. • It does not work in WPS office.
