It uses and extends the OSGi Core specification and the OSGi R4 specification. An OMG whitepaper has been published about OCF and you can read more about it on the OCF site. The first version of the OCF platform has been released last year. It comes with components for creating platform independent OCF bundles and some of the design patterns defined by the OSGi R4 specification have been implemented. OCF provides a base framework that you can use and extend. The framework is cross platform and runs on multiple operating systems (Windows and Linux). The goal is to provide all the base functionality and many of the design patterns so that you don't have to write a lot of code. You can use the OCF framework by downloading it from the site or installing it into a Linux installation. Projects like Apache Felix and Square's OSGi module system are used with the OCF framework. With them OCF uses the OSGi protocol and Repository specification to bind configuration files and code. Felix and OSGi contain features for versioning (e.g. remote parts of an application) and you can work with it through Felix Repository.
