nfsRadar is a cool screensaver that features two running radars and a small digital clock on the radar control board. The simple and clean interface of the screensaver allows you to view its radar and digital clock on the control panel. During idle mode, nfsRadar repeats the same screensaver over and over again. Each screen is a radar and a small digital clock, located on the control panel of this screensaver. Each radar has a circle, which changes to lines and polygons as the radar passes by each radar target. Each radar target is a graphical pattern that is displayed according to the movement of the radar. The biggest target in the two radar is a moving "line" graph and the smaller target is a rotating "polygon" graph. The biggest target with the "line" graph has a shape of a rectangle (horizontally moving) or a circle (vertically moving). The graphical pattern of the radar target will vary according to the movement of the radar. The rotating polygon target has two or three lines, depending on the rotation speed of the radar. During the idle mode, the small digital clock keeps updating the time. You can reset the digital clock when you are not sure how many times the screensaver will repeat. In addition to the main target, you can see the coordinates of each radar target on the radar control board. You can also see the coordinates of the radar "line" on the radar control board. Each radar target is numbered, so you can easily identify it. Each radar target can also be enlarged or reduced to any size with just one click on the mouse. You can choose to have the radar "line" graph fade or remain visible during the idle mode. After all, the screensaver will still be completely informative without any visual distractions. nfsRadar has a very clean and simple interface with a helpful window, which will only open when the screensaver begins. The interface is very easy to use and very intuitive. The interface of this screensaver does not require any training. nfsRadar is a freeware screensaver for Windows XP and Windows Vista. What's New in the Media Player?

Media Player is an image, video and media player software for Windows. It

is a standalone software which can easily play any type of media file, even if the filename ends with a ".DAT" extension. Thus, this program can support all major types of digital photos, including, among others, BMP, JPEG, GIF, PNG, TIFF, WMV, AVI, MP4, MOV and QT. In short, Media Player can handle every kind of media files. You can even open and play unformatted media files such as DIR. You can also play video files, depending on the video codec that they contain. Media Player will also take care of sound files, such as MP3, WAV, FLAC, AAC and OGG. It can even take care of basic sounds, like a beep or a chime. Media Player provides you with a rich media player that includes features such as hot keys, pause/stop controls, playlist capability, as well as an elaborate and modernized user interface. A fundamental advantage of Media Player is that it can convert and mix audio and video content, making it possible for you to enjoy your content in any format. Furthermore, Media Player supports most image formats, video formats, as well as sound formats, and can even play back DIR files. All in all, it is a versatile media player that can handle a lot of diverse multimedia content, while also allowing you to convert videos with the use of in-built conversion algorithms. Media Player can read text files, edit them, and convert them to any other format or file type. You can also use Media Player to read various types of metadata from any image file. On the other hand, this versatile media player lets you save subtitles in numerous languages, as well as select subtitle tracks and subtitles for a particular media file. In short, Media Player has its own way of interacting with its user interface, and it has a modern and flexible interface. It does not really weigh down the system resources, though, so you should not be worried about your computer getting slow while using it. What's New in this version: - Fixed some audio issues. - Fixed error in file viewer. - Added some new media formats. - Adjustments in help file. - Corrections in DPI and display settings. What's New in version 14.0.4: - New features: You can now open & play DIR files.
